- Office / Commercial / Domestic Lighting, Hotels, Retail and Display.
- Use for retrofit upgrades & new luminaire designs.

Wiring Diagram

• DALI Connection

• Push DIM Connection

The provided AC Push-Dim interface allows for a simple dimming method using commercially available non-latching (momentary) wall switches.

- **Short press:**
Turn on or off light.
- **Long press (1-6s):**
Press and hold to stepless dimming. With every other long press, the light level goes to the opposite direction.
- **Synchronization:**
If more than one LED driver are connected to the same push switch, do a long press for more than 10s, then the system is synchronized and all lights in the group dim up to 100%. This means there is no need for any additional synchrony wire in larger installations. We recommend the number of LED drivers connected to a push switch does not exceed 25 pieces, The maximum length of the wires from push to LED driver should be no more than 20 meters.

Installation precautions

Please do not stack the products.

The distance between two products should be $\geq 20\text{cm}$ so as not to affect heat dissipation and lifespan of the products.

Failure analysis and troubleshooting

Fault	Cause	Solution
The light can not be turned on	1. No power 2. Wrong wiring	1. Check the power supply 2. Connection test
Brightness of the light is inconsistent	1. Output cable is too long 2. Wire diameter is too small	1. Reduce wire length or loop power supply 2. Replace Replace to thicker wires
Hiccup flashing light	Overload	Check the power of the LED light
